

OVERVIEW

SAP SUCCESSFACTORS

People should be at the center of your human resources (HR) strategy – not paperwork. Manual HR methods of processing new employees, training them, and supporting an evolving workforce only stagnate your growth.

As businesses embrace the work-from-anywhere environment and bring on geo-dispersed talent, the need for an end-to-end employee file management system has never been greater. Modern businesses need automation to streamline HR and deliver the best possible employee experience. Look no further than SAP SuccessFactors from All Star.

WHAT IS SAP SUCCESSFACTORS?

SAP SuccessFactors is a cloud-based human capital management (HCM) software application. HCM technology applies automation to administrative HR functions – including recruiting, payroll, training, talent management, analytics, workforce planning, and more – to streamline these activities, support HR's productivity, and empower employees.

By connecting SAP SuccessFactors with other solutions, such as Hyland OnBase, you can make HR processes more efficient, reduce risk, and break down the data silos that create bottlenecks in your organization.

ALL STAR
SOFTWARE SYSTEMS

All Star offers the OnBase integration for SAP SuccessFactors, providing content capture, content management, workflow, case management, and document compliance capabilities directly from the user interface.

WHAT DO YOU GET WITH SAP SUCCESSFACTORS FROM ALL STAR?

All Star offers the OnBase integration for SAP SuccessFactors, providing content capture, content management, workflow, case management, and document compliance capabilities directly from the user interface. Directly within the SAP SuccessFactors application, your HR team can perform all document-related tasks, such as capturing, viewing, and storing employee files, as well as initiate various forms for things like HR onboarding and HR incident management. This integration allows your business to:

STREAMLINE EMPLOYEE ONBOARDING

HR won't waste hours processing the large amount of paperwork required to onboard an employee using the SAP SuccessFactors integration with OnBase. All document types, from non-disclosure agreements to contracts, can be reviewed, signed, uploaded, and stored in one place.

ENSURE COMPLIANCE

This integration brings automation to your compliance adherence. For example, if essential documents are missing from an employee record, the system automatically flags them. Users can upload the right files directly from SAP SuccessFactors, and the system also allows employees to flag expired documents. Additionally, employee content is stored in OnBase – a secured location – while OnBase's governance processes also help you avoid privacy violations, fines, and more.

TAKE MANUAL WORK OUT OF HR

Your HR team should be empowering employees to do their best work, not spending time searching for or processing paperwork. The OnBase integration for SAP SuccessFactors provides document capture, retention management capabilities, and centralized access to employee content – enabling HR to automate content management and reduce manual administrative tasks. Content management is embedded within SAP SuccessFactors, so HR no longer has to move among multiple applications to store or manage content.

CONFIGURE HR'S USER EXPERIENCE

All Star can help you configure and personalize dashboards in OnBase via an API-level connectivity to SAP SuccessFactors. Depending on your HR's processes, you can tailor the dashboard experience to further streamline content management.

LEVERAGE AUTOMATION TO IMPROVE HR AND THE EMPLOYEE EXPERIENCE

All Star has decades of experience helping organizations improve productivity, efficiency, and the bottom line through technology. If you're curious about how your business can use a next-generation employee file management system, get in touch with us today. We'll demonstrate how you can benefit from the SAP SuccessFactors integration with OnBase.
