SUMMARY

Going Mobile provides workers with easy access to documents and processes no matter where they are in the world. Organizations can decrease overall processing time and simultaneously increase productivity by always keeping transactions requiring review and approval at decision makers' fingertips.

Device specific applications gives users a rich user experience and functional environment to perform searches, view documents, add - edit - delete document notes and review - approve invoices all without requiring online access from a computer.

KEY BENEFITS

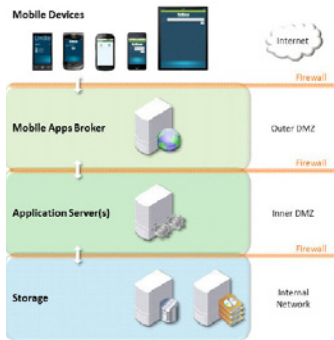

- Improve the cost efficiency and effectiveness of a workflow and content management solution by extending mobile access to users.
- Convenient access to documents and processes on the go, when away from the office or not at a computer.
- Make familiar or repetitive workflow decisions quickly and easily, without the need to access the full interface or a lackluster smartphone web interface.
- Leverage your company's existing mobile device investments, with out of the box integration that requires no custom coding.

INVOICE PROCESSING BUSINESS APPLICATION

- Invoices (paper, email attachments, XML, EDI) are captured
- Invoice header and line item data is extracted, verified and validated
- Workflow moves PO and Non-PO invoices into appropriate work streams
- Requisitioners can review and approve/deny mis-matched PO based invoices (web interface, Email or mobile device)
- Buyers can code non-PO invoice line items (web interface, Email or mobile device)
- This "intelligent" system will learn and improve data extraction and line item coding as well as table of authorization lookups
- Thresholds can notify users of invoices exceeding the time allowed in a queue whether in the office or via mobile device
- Common exceptions like invalid supplier or duplicate invoice are identified immediately and routed to appropriate personnel

KEY FEATURES AND ARCHITECTURE

- Interact with workflow in realtime supporting continuous, uninterrupted business process flows
- Execute searches to retrieve documents from anywhere.
- Administrative control to designate only certain Tasks and Searches to be accessible from the Mobile application.
- Familiar touchscreen gestures to; view, zoom, rotate and navigate multipage documents
- View document metadata
- Execute workflow tasks
- dd, view, edit and delete document notes
- Developed as a native application to provide a user experience consistent with other applications.
- Ease of deployment with the application available in common App Stores.

- Supports standard file formats including images, text, Office documents, PDF and HTML.
- Mobile App Broker provides an extra layer of security, allowing server mobile access to be hosted on a separate machine from the Application Server and supporting SSL.
